**“I enable my clients to make pragmatic business decisions based on their business goals and budgetary requirements. I do this by providing candid, thorough information and helping my clients make sense of that information. The ‘sky’s the limit’ approach isn’t usually the best one, so I focus on strategies that would have the most value in the context of the client’s business.”**

Sean O’Brien assists clients with obtaining, maintaining, and enforcing patent and trademark rights in the U.S. and abroad. He also advises and represents clients in opposition and cancellation proceedings before the Trademark Trial and Appeal Board (TTAB) as well as for post grant review and inter partes review patent proceedings before the Patent Trial and Appeal Board (PTAB). In addition, Sean negotiates intellectual property agreements, including licenses, and he resolves patent, trademark, copyright, and trade secret disputes outside of litigation. Sean also asserts and defends intellectual property infringement matters through litigation.

Before becoming a lawyer, Sean worked as a mechanical design engineer and project engineer at an aerospace company, where he designed, tested, and resolved manufacturing problems for antiskid brake control valves. He also worked in the automotive industry with door seal and wiring harness technologies, which included his first professional exposure to patent law. Sean’s undergraduate degree is in engineering, with a focus on fluid dynamics and thermodynamics.

Drawing on his prior broad experience, he aims to meet his client’s intellectual property goals in a candid, adept manner. Sean leads the firm’s intellectual property practice as well as its renewable energy team.

## Representative Experience
